

Water Loss Management in India - 10 March, 5pm IST (Indian Standard Time)

Non-revenue water or unaccounted for water is a major issue in most urban cities in India. Wikipedia defines non-revenue water (NRW) is water that has been produced and is "lost" before it reaches the customer. Losses can be real losses (through leaks, sometimes also referred to as physical losses) or apparent losses (for example through theft or metering inaccuracies). High levels of NRW are detrimental to the financial viability of water utilities, as well to the quality of water itself. NRW is typically measured as the volume of water "lost" as a share of net water produced. However, it is sometimes also expressed as the volume of water "lost" per km of water distribution network per day. Bangalore Water Supply and Sewerage Board (BWSSB) undertook a project on water loss management program. This webinar will present the case successful implementation of this program.

GOLD PARTNER

**Mr. Amit Vaidya, Director
Sales- Sensus**

**Mr. Devaraju M., Chief
Engineer - Water, BWSSB,
Bangalore, India**

SILVER PARTNERS

**Mr. Ravi Ulangwar, Director
Technical**

**Mr. Nilaksh Kothari,
Member, International
Council, AWWA & Past
President, AWWA, USA**

**Mr T. S. Kathayat, President & Chief
Technical Officer**

**Mr. Richard Hope,
Executive VP & America's
CTO, AECOM, USA**

**Mr. O. Vishveswaraiah, Vice
President, SPML Infra
Limited, New Delhi, India**
